

Name of the Event: Local excursion to New Garia and adjoining area

Organised by: Department of Botany

Date of Visit: 11th August 2026

Time: 10.30 a.m.

Venue: New Garia and adjoining area

Number of participants: 24 students of Semester II, Department of Botany

Teachers: 2

Laboratory attendant: 1

Description of the Event: A local excursion was organized for the students of Semester II, Department of Botany, as a part of their practical and field-based learning. During the excursion, the students collected specimens of different plant species belonging to various families. They observed the habit, habitat, root, stem, leaf, inflorescence, flower, fruit, and other characteristic features of the plants. The students also noted important diagnostic characters that helped them identify the respective plant families and species. The students recorded their observations in their field notebooks and collected representative specimens for further study and preparation of herbarium materials.

Outcome: The excursion helped the students develop practical skills in plant identification, field observation, specimen collection, and documentation. It also enhanced their understanding of angiosperm diversity and the characteristic features of different plant families. The local excursion was an informative and enriching learning experience that connected classroom knowledge with field studies.
